

## Iron Networks Maintenance Plans - Software Subscription (Up2date Services)

### Overview: Iron Networks Up2Date Service

Service Iron Networks will deliver new software releases for Iron Networks products. The Iron Networks Up2Date automated update service provides a simple mechanism to update the entire security platform, including new features, functionality improvement, software patches, virus, spam and threat signatures, even the embedded Linux or Windows operating system. The system also proactively notifies an administrator and allows for applying selected updates at convenient time.

Depending on the product there are different update services with different durations available.

<b>1. Fully Automated:</b>	Signature services for AntiVirus Engines, the Spam Protection and the Intrusion Protection System (IPS) with new patterns and/or IPS attack signatures. You have the option to either update patterns manually or automatically at specific time intervals
<b>2. Semi-Automated:</b>	Such as critical software patches.
<b>3. Manual Updates:</b>	Management tools and add-on software might be updated by manually downloading and installing newer software versions.

### Features: Iron Networks Up2Date Service

- 1. Type of Update:**
  - a. Minor Software Updates1) typically provide functionality improvements and bug fixes.
- 2. Type of Update:**
  - a. Minor Software Updates1) typically provide functionality improvements and bug fixes.
  - b. Major Software Updates2) typically provide major new features as well as functionality improvements and bug fixes.
